Technology • Solutions • Innovation

At Pulsion, we understand the challenges of reducing operating costs, increasing efficiencies and improving customer service. Our solutions and services are assisting organisations large and small to do just that, by automating, integrating and enhancing information sharing.

As a Microsoft Gold Partner, Oracle partner and through strategic relationships with other business specialists, we are ideally positioned to provide the seamless expertise and vision you would expect from a leading IT partner.

We are experienced and progressive and invest a great deal in product development and in our high calibre consultants and project management staff. Over the years we have gained an unrivalled reputation for consistently delivering on time and to budget and have proven to be a partner our clients can depend on.

Caman

Case Management

Pulsion Technology's Caman Case Management solutions are transforming ways of managing paperwork and processes.

For organisations managing large amounts of paper there will be pressure to increase turnaround times on case processing whilst ensuring the accuracy of data is maintained. An automated approach to case handling will alleviate this pressure.

Caman is web enabled and ensures that documents, files and tasks are stored in a central location. Cases are routed through the business process electronically, reducing paper based processes and overheads. Various members of staff can monitor the status of cases quickly and securely.

The Caman product set includes:

- Caman Case Manager
- Caman Grants Manager
- Caman Claims Manager
- Caman Fund Manager
- Caman Welfare to Work

Some key features include:

- Workflow Manager - this moves the search requests or cases through key stages via workflows

- Print Manager - generates a suite of standard documents and emails from within the application
- Document Manager - allows a user to attach case related electronic documents to a record
- Management reporting - allows quick and secure access to detailed management reports and vastly improved visibility of information across cases

“The integration project has really improved the way we process information across our business. From the onset Pulsion Technology had a real understanding of our requirements and delivered a solution which allows us to work much more efficiently.”

Adam Tulk
IT Director
Russell, Jones & Walker

eSquiggles

Mobile Working

eSquiggles is Pulsion's Mobile Working and Data Capture Solution. It is designed to run on a Hand-Held PC (PDA) and enables field workers to capture data from surveys/audits and send that data between the PDA and the office.

eSquiggles automatically creates completed documents in Word or Excel formats, reduces the need for re-typing and saves vast amounts of time, whilst greatly improving efficiency.

A choice of pricing models, including Software as a Service (SaaS) ensures eSquiggles is affordable to businesses large and small.

Key benefits include:

- Electronic data collection using text, voice, photo and signature capture
- Reduces time required to complete jobs/tasks
- Reduces operational costs, saves paperwork and increases productivity
- Automatically updates existing databases and generates complete reports in Word and Excel format
- Reduces retyping and increases accuracy of data
- Integrates with existing IT systems
- GPS (global positioning system) helps mapping and optimisation of job allocation and staff management
- Generates regular reports, improving Management Reporting

Microsoft SharePoint

Knowledge Management

IT solutions such as Microsoft Sharepoint for Corporate Intranets and Extranets provide one secure, central information store across an organisation. These types of secure web-enabled portals promote collaborative working with clients and partner organisations, providing remote and secure access to content, data and documents.

They also reduce the huge amounts of time and effort companies can spend on locating information internally. Pulsion Technology has experienced Sharepoint qualified consultants and a successful track record of Sharepoint implementations. This type of project can be implemented and delivering benefits in as little as 10 days!

Some key features include:

- Access to all documentation and core IT systems via one single point of entry
- Access to management reports seamlessly
- Sharing of information across departments, offices and externally with partner companies

Management Reporting

Business intelligence

Analysing data and extracting management reports from systems is complex. Pulsion Technology has extensive experience of designing

sophisticated yet intuitive management reports for clients in a number of markets.

These provide decision makers with:

- detailed management information across an organisation
- analysis of performance against Key Performance Indicators
- quick and secure access to detailed management reports
- secure access to business intelligence with internal and external sources
- data warehouses, management information systems and digital dashboards

“ Effectively Pulsion has enabled a one stop shop approach to financial reporting. In short, it brings the selected financial data together into a single view. Historically this was available over several separate reports which were time consuming to produce and analyse. ”

John Haugh
Finance Manager
Simpson & Marwick

Systems Integration

Most organisations today operate using a growing number of 'back office' IT systems. These systems and the information they hold are pivotal to the success of an organisation. Quite often

these systems will operate independently of each other and remain in different 'silos' within an organisation.

Joining up these systems and information across an organisation is key to driving more efficient ways of working. Integration can be achieved cost effectively.

Organisations can transfer and share data across departments, geographic locations and with external partner organisations. Pulsion has worked with clients to integrate back office IT systems, and in particular with applications such as CRM to allow organisations to gain a corporate view of clients and data, and manage information in a seamless way.

Software Development

We have embarked on a large number of bespoke application development type projects, for a range of public and private sector clients. The premise behind a large majority of our projects is streamlining business processes, enhancing information sharing and ultimately, driving business efficiency.

Pulsion Consultants are skilled and experienced in scoping out business requirements in partnership with the client. This ensures that the solution meets the needs of the client, whether as an 'off the shelf' solution or a customised development.
